### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the claimed invention of creating a gas stream by mixing gas and solid fuel particles with gas then injecting the mixture into a combustion chamber at a fuel exit plane coincident with the wall of the chamber and further injecting an oxygen stream into the fuel gas to create a mixing zone is not found in the prior art either singly or in combination. The closest prior art reference is considered Carlson (Statutory Invention Registration H19) which discloses mixing fuel and oxygen but not the claimed fuel gas stream created by mixing solid fuel particles with a conveying gas. The claimed mixing occurs before the prior art disclosed oxygen mixing such that the claimed invention is patentably distinct from the prior art because mixing occurs in two steps rather than only one as disclosed. The claimed invention is further distinguished from the prior art in that the claimed fuel exit plane is coincident with a wall of the chamber. Carlson does not expressly or inherently teach that feature. Other prior art references cited in the application do not provide the motivation or combination suggestion to obviate the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
